

# Spaying and Neutering Pets

Protect your pet and control the pet overpopulation

Spaying and neutering are an imperative part of responsible pet ownership. Both are surgical procedures that make it impossible for pets to reproduce offspring.

## KEY BENEFITS:

### ■ Fewer unwanted pets

*The number of unwanted kittens and puppies in animal shelters keeps increasing, by spaying/neutering, you can help reduce these numbers.*

### ■ Less behavior problems

*Spaying/neutering reduces unwanted behaviors such as spraying, roaming, mounting, inappropriate elimination.*

### ■ Longer, healthier life

*Medical studies show that spayed/neutered pets are less likely to contract diseases and illnesses, such as cancer and infection.*
